

HYDAC INTERNATIONAL

Diaphragm Accumulators

1. DESCRIPTION

1.1. FUNCTION

Fluids are practically incompressible and cannot therefore store pressure energy. The compressibility of a gas is utilised in hydraulic accumulators for storing fluids.

HYDAC diaphragm accumulators are based on this principle, using nitrogen as the compressible medium.

Diaphragm accumulators consist of a fluid section and a gas section with the diaphragm acting as a gas-tight separation element.

The fluid section is connected to the hydraulic circuit so that the diaphragm accumulator draws in fluid when the pressure increases and the gas is compressed. When the pressure drops, the compressed gas expands and forces the stored fluid into the circuit.

Set into the base of the diaphragm is a valve plate. This shuts off the hydraulic outlet when the accumulator is completely empty and thus prevents damage to the diaphragm.

Notice:

HYDAC diaphragm accumulators when fitted with a HYDAC safety and shut-off block comply with the regulations of the European Pressure Equipment Directive (PED) and the German Industrial Safety Regulations (Betr.Sich.V.).

See catalogue section:

- Safety and shut-off block SAF/DSV No. 3.551

1.2. DESIGN

HYDAC diaphragm accumulators are available in two versions.

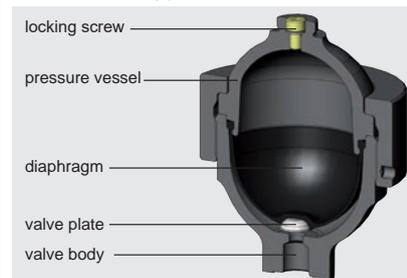

1.2.1 Weld type

This consists of:

- Welded pressure vessel, rechargeable on the gas side or, alternatively, completely sealed. Fluid port available in various types.
- Diaphragm to separate the fluid and gas sections.
- Valve plate set into the base of the diaphragm.

1.2.2 Screw type

This consists of:

- Forged upper section with gas charging connection.
- Forged lower section with fluid port.
- Exchangeable flexible diaphragm to separate the gas and fluid.
- Vulcanised valve plate set into the base of the diaphragm.
- Lock nut to hold the upper and lower sections of the accumulator together.

1.2.3 Diaphragm material

The diaphragm material must be selected in accordance with the particular operating medium or operating temperature, see section 2.1. If discharge conditions are unfavourable (high p_2/p_0 pressure ratio, rapid discharge speed), the gas may cool to below the permitted temperature. This can cause cold cracking. The gas temperature can be calculated using the HYDAC Accumulator Simulation Program ASP.

1.2.4 Corrosion protection

For use with chemically aggressive fluids the hydraulic accumulator can be supplied with corrosion protection, such as plastic coating or a galvanic or chemical surface protection. If this is insufficient, then almost all types can be supplied in stainless steel.

1.3. INSTALLATION POSITION

Any position can be chosen. However, if there is a risk of contamination collecting, a vertical position is preferable (fluid port at the bottom).

1.4. TYPE OF INSTALLATION

Hydraulic accumulators up to a nominal volume of 2 l can be screwed directly inline.

Where strong vibrations are expected, the hydraulic accumulator must be secured to prevent it working loose. For weld type hydraulic accumulators we recommend HYDAC mounting clamps. For screw type diaphragm accumulators with a lock nut, a suitable support console can be ordered.

For an additional male thread on the hydraulic connection for screwing into mounting holes, see Table 3.1

See catalogue section:

- Mounting elements for hydraulic accumulators No. 3.502

2. SPECIFICATIONS

2.1. EXPLANATIONS, NOTES

2.1.1 Permitted operating pressure

See Tables 3.1. and 3.2.

The permitted operating pressure can differ from the nominal pressure for foreign test certificates.

2.1.2 Permitted operating temperature of the hydraulic accumulator

-10 °C ... +80 °C

Standard design, others on request

2.1.3 Nominal volume

See Tables 3.1. and 3.2.

2.1.4 Effective gas volume

Corresponds to the nominal volume of the diaphragm accumulator.

2.1.5 Effective volume

Volume of fluid which is available between the operating pressures p_2 and p_1 .

2.1.6 Gas charging

All accumulators are supplied with a protective pre-charge. Higher gas pre-charge pressures are available on request (gas charging screw or sealed gas connection).

Hydraulic accumulators must only be charged with nitrogen.

Never use other gases.

Risk of explosion!

In principle, only use nitrogen of at least Class 4.0 (filtration < 3 µm).

If other gases are to be used, please contact HYDAC for advice.

2.1.7 Limits for gas pre-charge pressure

$$p_0 \leq 0.9 \cdot p_1$$

For diaphragm accumulators with PTFE diaphragms, the following applies: $p_{0max} \leq 200$ bar

For further information, see catalogue section:

- HYDAC Accumulator Technology No. 3.000

2.1.8 Permitted pressure ratio

See Tables 3.1. and 3.2.

Ratio of max. operating pressure p_2 to gas pre-charge pressure p_0 .

The specified values are maximum values and must not be considered as referring to a permanent load. The tolerable pressure ratio is influenced by the geometry, temperature, fluid and flow rate as well as any gas losses due to physical properties.

2.1.9 Max. flow rate of the operating fluid

In order to achieve the max. flow rate given in the tables, a residual fluid volume of approx. 10 % of the effective gas volume must remain in the accumulator.

The maximum fluid flow rate was determined under specific typical conditions and is not applicable in all operating conditions.

2.1.10 Working temperature and operating medium

The permitted working temperature of a diaphragm accumulator is dependent on the application limits of the metal materials and the diaphragm. Outside this temperature range, special materials must be used. The operating medium must also be taken into account.

The following table displays a selection of elastomer materials including max. temperature range and a rough overview of resistant and non-resistant fluids. Please contact us for help in selecting a suitable elastomer.

| Materials | | Material code ¹⁾ | Temperature range | Overview of the fluids ²⁾ | |
|-----------|---------------------------------------|-----------------------------|--------------------|--|---|
| | | | | Resistant to | Not resistant to |
| NBR | Acrylonitrile butadiene rubber | 2 | -15 °C ... + 80 °C | <ul style="list-style-type: none"> ● Mineral oil (HL, HLP) ● Flame-retardant fluids from the groups HFA, HFB, HFC | <ul style="list-style-type: none"> ● Aromatic hydrocarbons ● Chlorinated hydrocarbons (HFD-S) |
| | | 5 | -50 °C ... + 50 °C | <ul style="list-style-type: none"> ● Synthetic esters (HEES) ● Water ● Sea water | <ul style="list-style-type: none"> ● Amines and ketones ● Hydraulic fluids from the group HFD-R ● Fuels |
| ECO | Ethylene oxide epichlorohydrin rubber | 3 | -40 °C ... +120 °C | <ul style="list-style-type: none"> ● Mineral oil (HL, HLP) ● Flame-retardant fluids from the group HFB ● Synthetic esters (HEES) ● Water ● Sea water | <ul style="list-style-type: none"> ● Aromatic hydrocarbons ● Chlorinated hydrocarbons (HFD-S) ● Amines and ketones ● Hydraulic fluids from the group HFD-R ● Flame-retardant fluids from the groups HFA and HFC ● Fuels |
| IIR | Butyl rubber | 4 | -50 °C ... +120 °C | <ul style="list-style-type: none"> ● Hydraulic fluids from the group HFD-R ● Flame-retardant fluids from the group HFC ● Water | <ul style="list-style-type: none"> ● Mineral oils and mineral greases ● Synthetic esters (HEES) ● Aliphatic, chlorinated and aromatic hydrocarbons ● Fuels |
| FKM | Fluorine rubber | 6 | -10 °C ... +150 °C | <ul style="list-style-type: none"> ● Mineral oil (HL, HLP) ● Hydraulic fluids from the group HFD ● Synthetic esters (HEES) ● Fuels ● Aromatic hydrocarbons ● Inorganic acids | <ul style="list-style-type: none"> ● Amines and ketones ● Ammonia ● Skydrol and HyJet IV ● Steam |

¹⁾ See section 2.2. Model code, material code, diaphragm

²⁾ Others available on request

2.1.11 Certificate codes

Hydraulic accumulators which are installed in countries outside Germany are supplied with the test certificates required in that country. The user country must be stated at the time of ordering.

HYDAC pressure vessels can be supplied with virtually any test certificate.

Please note that the permitted operating pressure can differ from the nominal pressure.

The following table contains a few examples of the codes used in the model code for different countries of installation:

| Country | Certificate code (CC) |
|------------------|-----------------------|
| EU member states | U |
| Australia | F ¹⁾ |
| Belarus | A6 |
| Canada | S1 ¹⁾ |
| China | A9 |
| Hong Kong | A9 |
| Iceland | U |
| Japan | P |
| Korea (Republic) | A11 |
| New Zealand | T |
| Norway | U |
| Russia | A6 |
| South Africa | S2 |
| Switzerland | U |
| Turkey | U |
| Ukraine | A10 |
| USA | S |

¹⁾ Registration required in the individual territories or provinces.

Others on request

2.1.12 Notice

All work on HYDAC diaphragm accumulators must only be carried out by suitably trained staff.

Incorrect installation or handling can lead to serious accidents.

The operating instructions must be observed!
No. 3.100.BA

Detailed assembly and repair instructions are available for work which may be carried out on the diaphragm accumulator after installation and commissioning, e.g. repair work.

Further information such as accumulator dimensioning, safety information and extracts from the acceptance specifications can be found in the following catalogue section:

- HYDAC Accumulator Technology No. 3.000

Relevant PDF documents can be accessed at:

www.hydac.com » Downloads » Documents » Accumulator Division

2.2. MODEL CODE

Not all combinations are possible. Order example.
For further information, please contact HYDAC.

SBO210 - 2 E1 / 112 U - 210 AK 050

Series

Nominal volume [l]

Type

Weld type:

- E1 = rechargeable M28x1.5
- E2 = sealed gas connection, with gas pre-charge as requested ¹⁾
- E3 = rechargeable, gas valve M16x1.5 / M14x1.5

Screw type

- A6 = rechargeable M28x1.5, exchangeable diaphragm
- A3 = gas valve M16x1.5 / M14x1.5, exchangeable diaphragm

Material code

dependent on operating medium
 standard design = 112 for mineral oil

Fluid port

- 1 = carbon steel
- 3 = stainless steel ²⁾
- 4 = carbon steel with protective coating ³⁾
- 6 = low-temperature steel
- 7 = other materials

Accumulator shell

- 0 = plastic coating
- 1 = carbon steel
- 2 = carbon steel with protective coating ^{3) 4)}
- 4 = stainless steel ²⁾
- 6 = low-temperature steel
- 7 = other materials or material combinations

Diaphragm

- 2 = NBR ⁵⁾
- 3 = ECO
- 4 = IIR
- 5 = NBR ⁵⁾
- 6 = FKM
- 7 = other materials (e.g. PTFE, EPDM)

Certification code

U = European Pressure Equipment Directive (PED)

Permitted operating pressure [bar]

Fluid port form

Standard connection = AK or AB

e.g. form AK = G 3/4
 for SBO210-2 see section 3.

Pre-charge pressure p_0 [bar] at 20 °C, must be stated clearly, if required! ¹⁾

¹⁾ Only for E1 or E2 design, when ordered as standard

²⁾ Dependent on type and pressure level

³⁾ Only for screw type design

⁴⁾ Only for parts that come into contact with fluid

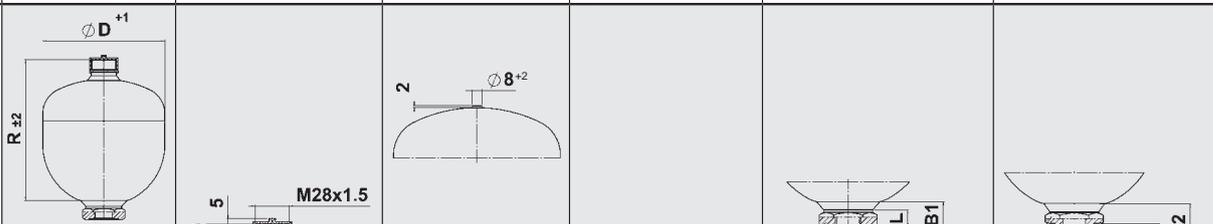

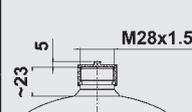

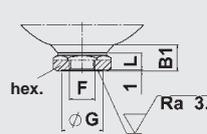

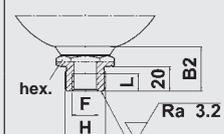

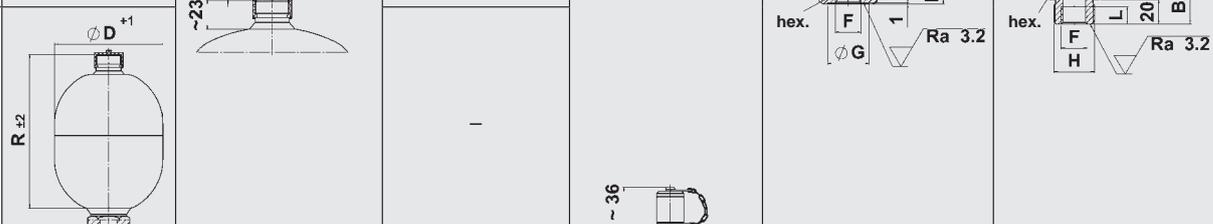

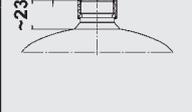

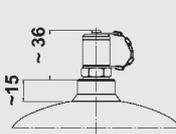

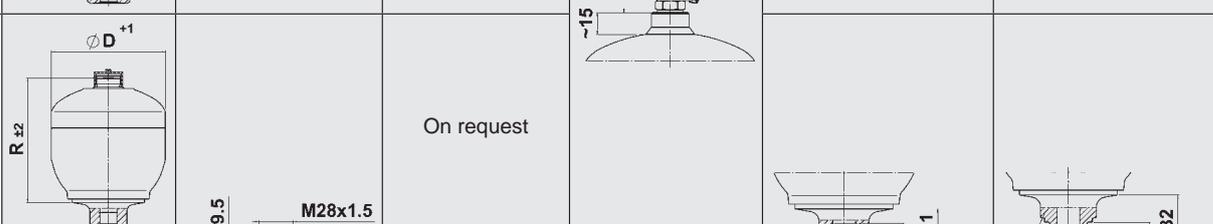

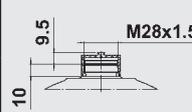

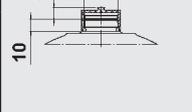

⁵⁾ Observe temperature ranges, see section 2.1.
